Abdullah Yasser
Backend .NET Developer
+201026568617 | contact.elbana@gmail.com |https://www.linkedin.com/in/abdullah-elbana/ | GitHub: abda-24

Summary
Results-driven **.NET Backend Developer** with practical experience in building and deploying **scalable RESTful APIs** using **ASP.NET Core**. Skilled in **Clean Architecture**, **JWT/Identity**, and **database performance optimization**. Experienced in implementing complex backend features such as **real-time communication**, **caching**, and **e-commerce systems**.
Proven ability to deliver **efficient, maintainable, and high-performance solutions** that enhance user experience and system reliability. Seeking to contribute to a **dynamic development team**.

Technical Skills
Languages:
C#, SQL, LINQ, JavaScript
Frameworks / .NET:
ASP.NET Core Web API, .NET Core, ASP.NET MVC, Entity Framework Core (EF Core)
Architecture & Design:
Clean Architecture, Onion Architecture, Specification Pattern, Repository & Unit of Work, RESTful API Design, OOP Principles
Databases & Tools:
SQL Server, Redis (Caching), JWT, ASP.NET Identity, Swagger, Git
Frontend Technologies:
HTML, CSS, JavaScript, jQuery, Bootstrap

Education
Bachelor of Computer Science
Misr University for Science and Technology – Expected Graduation: 2026

Experience & Training
Back-End .NET Developer Intern | Route Academy
April 2025 – Present

- Developed and consumed **RESTful APIs** using **ASP.NET Core**, improving data response time by **25%** through optimized query handling.
- Handled secure user **authentication, authorization,** and database operations using SQL Server.
- Practiced version control using **Git** and worked collaboratively on multi-developer projects.

Trainee – Full Stack .NET Track | Digital Egypt Pioneers Initiative (DEPI)
May 2025

- Studied full-stack development with a core focus on **ASP.NET Core (Back-End)** principles.
- Gained exposure to software engineering principles and agile methodologies.

Selected Projects
1. SocialApp Backend API (High-Complexity Social Platform)

- Designed and deployed a scalable backend covering a complete social graph lifecycle (Friends, Posts, Comments, Likes).
- • Improved message delivery speed by **35%** using SignalR real-time communication.
  • Handled over **10K+ potential users** during load testing.
- Developed personalized **Feed & Recommendation** engine endpoints for dynamic content discovery.

- Secured all API endpoints using **JWT Authentication** and granular **Role-Based Access Control**. **GitHub:** https://github.com/abda-24/SocialApp

2. E-Commerce Platform API (Enterprise Architecture)

- Architected the system using **Onion Architecture** and the **Specification Pattern** for maximum testability.
- Achieved high performance by integrating **Redis Caching** for critical product/catalogue data, reducing database load.
- Managed the full commerce workflow, including secure payments via **Stripe Integration** and order processing.
- Built dedicated **Admin Dashboard APIs** for business intelligence (Sales Summaries, Low-Stock Alerts). **GitHub:** https://github.com/abda-24/EcommerceBackend-DashBoard

3. Blog System RESTful API (Foundational System)

- Developed a robust **RESTful blogging API** with full CRUD for Posts, Comments, and User Engagement (Like/Unlike).
- Improved search response time by **25%** with pagination and query optimization.
  • Supported **1K+ blog posts** efficiently with RESTful architecture.
- Secured the platform with a complete **JWT Authentication** flow (Registration, Login, Password Reset). **GitHub: https://github.com/abda-24/BlogElbannaAPI**

Languages

Arabic (Mother Tongue) | **English** (Working Proficiency)
